PROFILE

IBM Certified Data Scientist with over four years of hands-on experience building data pipelines, predictive models, and interactive dashboards. I've helped teams cut reporting time by 40%, lift marketing ROI by 22%, and identify over \$500K in potential annual savings through machine learning. Comfortable working end-to-end: from raw data extraction to delivering clear, actionable insights for stakeholders.

CORE SKILLS

Python (pandas, scikit-learn)

SQL & BigQuery

R & SPSS

Machine Learning

Power BI & Tableau

Predictive Modeling

A/B Testing

Web Scraping

ETL & Data Wrangling

Statistical Analysis

Customer Segmentation

Time Series Forecasting

EXPERIENCE

Technical Support Officer (Bluehost) – Data-Driven Web Solutions

Bluehost / Remote

2023 – Present

- Help customers optimise server configurations, implement analytics tracking, and troubleshoot performance issues – bridging the gap between hosting infrastructure and data insights.
- Built welcome2america.org (tourism platform) with integrated Google Analytics 4, event tracking on key user actions, and a lightweight real-time dashboard to monitor visitor trends; designed to adapt content based on user behaviour.
- Full management of ipadawale.org – implemented custom data layer, form conversion tracking, scroll depth, and referral source analysis. Optimised load times by 34% and set up weekly performance reports using Google Looker Studio.
- Both websites feature: privacy-conscious tracking, A/B test readiness, and performance monitoring (LCP, CLS) – turning raw traffic into actionable business insights.

Data Analyst Intern

Data Science Nigeria (DSN) — Lagos

August 2023 — October 2023

- Automated data collection and reporting workflows with Python, reducing manual effort by 40% across the team.
- Developed a stock price forecasting model using time series analysis that reached 90% accuracy on validation data.

Google Analytics 4 / Tag Manager

Looker Studio

CERTIFICATIONS

IBM Data Analyst Professional Certificate (2022) — 9-course series

Data Scientist in Python — DataCamp

Data Analyst in Python — DataCamp

Associate SQL Developer — DataCamp

Finance Data Analysis & Analytics — IMTF (2025)

CompTIA A+ | HubSpot SEO & Email Marketing

Cisco: Intro to Cybersecurity, Cyber Sec Fundamentals

EDUCATION

B.Sc. Estate Management — University of Ibadan (expected 2026)

Data Science Program — Learnify Academy (2025)

Data Analytics — IBM (completed 2022)

ADDITIONAL CREDENTIALS

Web Scraping in Python — DataCamp

Intermediate Python — DataCamp

Building Your Own Database Agent — DeepLearning.AI

Intermediate SQL — DataCamp

- Built a web scraping pipeline with BeautifulSoup, consolidating data from over five external sources into one structured feed.
- Designed Power BI dashboards to track A/B test performance, contributing to a 22% lift in marketing ROI.

Front-End Developer & Analyst

EduCare — Lagos

April 2021 — January 2022

- Translated business requirements into technical specifications and SQL queries to analyze user engagement patterns.
- Built a library of reusable HTML/CSS components, cutting design-to-development handoff time by 60%.
- Created predictive models to forecast user activity trends, informing content personalization decisions.

TOP PROJECTS

Patient No-Show Prediction

Analyzed over 110,000 medical appointment records using five machine learning models, achieving 79.6% accuracy. Identified that wait times beyond 30 days correlated with a 35% no-show rate. Model insights pointed to over \$500K in potential annual savings for healthcare providers. — Python, Scikit-learn, Power BI

Healthcare Financial Dashboard

Built an interactive Power BI dashboard analyzing £3.36M in billing data. Highlighted top revenue drivers (X-Ray at 31%, CT Scan at 24%) and uncovered patient out-of-pocket payment trends using DAX measures, Azure maps, and a custom date table. — Power BI, DAX, Azure

Customer Segmentation & Clustering

Applied K-Means and Hierarchical clustering to a dataset of 10,000 customers, surfacing five high-value segments. Delivered a concise set of targeting recommendations that the marketing team used to sharpen campaign focus and improve retention. — Python, Scikit-learn, Tableau

Housing Market Analysis with SPSS

Quantified how Nigeria's monetary policy instruments (CRR, MPR) affect residential property prices in Ibadan. A segmented regression approach revealed that CRR changes predominantly influence 2-bedroom prices, while MPR shifts drive 3-bedroom valuations. — SPSS, Regression Analysis

TECHNICAL TOOLKIT

Python (pandas, sklearn, bs4)

SQL (PostgreSQL, BigQuery)

R & RStudio

Power BI & Tableau

SPSS & Jupyter

Git & GitHub

HTML/CSS & Figma

GA4 / GTM / Looker Studio
